DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 21 – 29 and 33 - 45, drawn to using transmitter receiver combinations to provide measurement selective sensitivity to the desired reservoir formation properties, classified in class 324, subclass 339.
- II. Claims 30 - 32, drawn to detection of the direction of the more resistive of the first and second layers relative to the selected layer, classified in class 324, subclass 343.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because claims in group I indicates that the combination of group I does not require the specifics of group II such as group I does not require the excitation of the first transmitter having a second axial direction inclined to the first axial direction and the excitation of the second transmitter having a third axial direction inclined to the first and second axial directions. The subcombination

Art Unit: 2862

has separate utility such as group II is determining the direction of the more resistive of the first and second layers relative to the selected layer as opposed to group I which is providing measurement to the selective sensitivity to the desired reservoir formation properties.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

A telephone call was made to Mr. Roebuck on 07/12/05 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
